Plant Science, 75 (1991) 269—271
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 75 (1991)

Active site groups, isocitrate lyase, chemical inactivation, protection by substrate, 47
Activity, aminopeptidase, cotyledons, *Glycine max*, HPLC, purification, 9
Aminopeptidase, cotyledons, *Glycine max*, HPLC, purification, activity, 9
Ammonium repression, *Funaria*, NADPH-nitrate reductase, 185
Apoplast, stress, heat, ethylene, 19
Arachidonic acid, lipoxygenase, *Lupinus albus*, 215
Arachis hypogaea, lectin homology, nodule lectin, seed lectin, 123
Artemisia annua, tobamoviruses, virus inhibitory agents(s), β-sitosterol, stigmasterol, 161
Asymmetric membrane breakdown, electrofusion, protoplast (mesophyll and suspension culture), *Nicotiana tabacum*, *Pennisetum americanum*, *Panicum maximum*, selective pairing, 93

Betula pendula, protoplast isolation, photosynthesis, homogeneity, diurnal cycle, 73
Brassica napus, cytoplasmic male sterility, cybrid, triazine tolerance, protoplast fusion, Ogura cytoplasm, 63

Callus growth, protein differences, shoot regeneration, 83
Castanea, *Quercus*, globulins (11S), glutelins, 145
Catharanthus roseus, growth substances, inositol phosphates, phosphatidylinositol cycle, phytohormones, PI-kinase, suspension cultured plant cells, 33
Cell and tissue culture, *Nicotiana tabacum*, choline kinase, lipids, phosphatidylcholine, 167
Cell culture, protoplast-calli, potato, protoplasts, *Solanum phureja*, 257
Cell proliferation, *Pisum sativum*, nuclear proteins, protein kinase, 39
Cell wall, *Chlamydomonas reinhardtii*, glycoproteins, mRNA, in vitro translation, 129
Chemical inactivation, isocitrate lyase, active site groups, protection by substrate, 47
Chlamydomonas reinhardtii, cell wall, glycoproteins, mRNA, in vitro translation, 129
Choline kinase, *Nicotiana tabacum*, cell and tissue culture, lipids, phosphatidylcholine, 167
Chromatin, non-histone chromosomal proteins, HMG proteins, nuclei, *Pisum sativum*, 55
Chromosomes, *Haplopappus gracilis*, tissue culture, clonal multiplication, clonal stability, karyotype analysis, 245
Clonal multiplication, *Haplopappus gracilis*, tissue culture, clonal stability, karyotype analysis, chromosomes, 245
Clonal stability, *Haplopappus gracilis*, tissue culture, clonal multiplication, karyotype analysis, chromosomes, 245
Cotyledons, aminopeptidase, *Glycine max*, HPLC, purification, activity, 9
Cybrid, cytoplasmic male sterility, triazine tolerance, *Brassica napus*, protoplast fusion, Ogura cytoplasm, 63
Cytidine, *Solanum tuberosum*, diphosphocholine, phospholipase C, 25
Cytoplasmic male sterility, cybrid, triazine tolerance, *Brassica napus*, protoplast fusion, Ogura cytoplasm, 63

Daucus carota, zygotic and somatic embryos, storage lipids, petroselinic acid, 177
Differentiation, *Glycine max*, lipid metabolism, seeds, 1
Diphosphocholine, *Solanum tuberosum*, cytidine, phospholipase C, 25
Diurnal cycle, *Betula pendula*, protoplast isolation, photosynthesis, homogeneity, 73
DNA analysis by flow cytometry, *Solanum tuberosum*, protoplast fusion, micromanipulation, somatic hybrids, isozyme analysis, 107
Durum wheat, wheat storage proteins, PCR, gene cloning, *Triticum turgidum*, 229

Electrofusion, asymmetric membrane breakdown, protoplast (mesophyll and suspension culture), *Nicotiana tabacum*, *Pennisetum americanum*, *Panicum maximum*, selective pairing, 93
Ethylene, stress, heat, apoplast, 19
Extracellular reduction, ferricyanide, nitrate reductase, *Monoraphidium braunii*, 221

Ferricyanide, extracellular reduction, nitrate reductase, *Monoraphidium braunii*, 221
Funaria, NADPH-nitrate reductase, ammonium repression, 185

Gene cloning, wheat storage proteins, PCR, *Triticum turgidum*, durum wheat, 229
Gene transfer, maize cell transformation, particle gun, β-glucuronidase, 237
Globulins (11S), *Castanea*, *Quercus*, glutelins, 145
β-Glucuronidase, maize cell transformation, particle gun, gene transfer, 237
Glutelins, *Castanea*, *Quercus*, globulins (11S), 145
Glycine max, aminopeptidase, cotyledons, HPLC, purification, activity, 9
Glycine max, differentiation, lipid metabolism, seeds, 1

Glycoproteins, cell wall, *Chlamydomonas reinhardtii*, mRNA, in vitro translation, 129
Growth substances, *Catharanthus roseus*, inositol phosphates, phosphatidylinositol cycle, phytohormones, PI-kinase, suspension cultured plant cells, 33

Hairy roots, horseradish, isoperoxidase, regenerated plants, 195
Haplopappus gracilis, tissue culture, clonal multiplication, clonal stability, karyotype analysis, chromosomes, 245
Heat, stress, ethylene, apoplast, 19
HMG proteins, non-histone chromosomal proteins, chromatin, nuclei, *Pisum sativum*, 55
Homogeneity, *Betula pendula*, protoplast isolation, photosynthesis, diurnal cycle, 73
Horseradish, hairy roots, isoperoxidase, regenerated plants, 195
HPLC, aminopeptidase, cotyledons, *Glycine max*, purification, activity, 9
HPLC purification, *Phomopsis helianthi*, phomozin, phytotoxin, in-vivo production, 155

In-vivo production, *Phomopsis helianthi*, phomozin, phytotoxin, HPLC purification, 155
Inositol phosphates, *Catharanthus roseus*, growth substances, phosphatidylinositol cycle, phytohormones, PI-kinase, suspension cultured plant cells, 33
In vitro translation, cell wall, *Chlamydomonas reinhardtii*, glycoproteins, mRNA, 129
Isocitrate lyase, active site groups, chemical inactivation, protection by substrate, 47
Isoperoxidase, hairy roots, horseradish, regenerated plants, 195
Isozyme analysis, *Solanum tuberosum*, protoplast fusion, micromanipulation, somatic hybrids, DNA analysis by flow cytometry, 107

Karyotype analysis, *Haplopappus gracilis*, tissue culture, clonal multiplication, clonal stability, chromosomes, 245

Lateral root, pea root, light response, 117
Lectin homology, *Arachis hypogaea*, nodule lectin, seed lectin, 123
Light response, pea root, lateral root, 117
Lipids, *Nicotiana tabacum*, cell and tissue culture, choline kinase, phosphatidylcholine, 167
Lipid metabolism, *Glycine max*, differentiation, seeds, 1
Lipoxygenase, arachidonic acid, *Lupinus albus*, 215
Lupinus albus, lipoxygenase, arachidonic acid, 215

Maize cell transformation, particle gun, gene transfer, β-glucuronidase, 237
Micromanipulation, *Solanum tuberosum*, protoplast fusion, somatic hybrids, isozyme analysis, DNA analysis by flow cytometry, 107
Monoraphidium braunii, ferricyanide, extracellular reduction, nitrate reductase, 221
mRNA, cell wall, *Chlamydomonas reinhardtii*, glycoproteins, in vitro translation, 129
Myo-inositol, pectin, polyphosphoinositide, soybean (cell suspension), 203

NADPH-nitrate reductase, *Funaria*, ammonium repression, 185
Nicotiana tabacum, asymmetric membrane breakdown, electrofusion, protoplast (mesophyll and suspension culture), *Pennisetum americanum*, *Panicum maximum*, selective pairing, 93
Nicotiana tabacum, cell and tissue culture, choline kinase, lipids, phosphatidylcholine, 167
Nitrate reductase, ferricyanide, extracellular reduction, *Monoraphidium braunii*, 221
Nodule lectin, *Arachis hypogaea*, lectin homology, seed lectin, 123
Non-histone chromosomal proteins, HMG proteins, chromatin, nuclei, *Pisum sativum*, 55
Nuclear proteins, *Pisum sativum*, protein kinase, cell proliferation, 39
Nuclei, non-histone chromosomal proteins, HMG proteins, chromatin, *Pisum sativum*, 55

Ogura cytoplasm, cytoplasmic male sterility, cybrid, triazine tolerance, *Brassica napus*, protoplast fusion, 63

Panicum maximum, asymmetric membrane breakdown, electrofusion, protoplast (mesophyll and suspension culture), *Nicotiana tabacum*, *Pennisetum americanum*, selective pairing, 93
Particle gun, maize cell transformation, gene transfer, β-glucuronidase, 237
PCR, wheat storage proteins, gene cloning, *Triticum turgidum*, durum wheat, 229
Pea root, lateral root, light response, 117
Pectin, *myo*-inositol, polyphosphoinositide, soybean (cell suspension), 203
Pennisetum americanum, asymmetric membrane breakdown, electrofusion, protoplast (mesophyll and suspension culture), *Nicotiana tabacum*, *Panicum maximum*, selective pairing, 93
Phomopsis helianthi, phomozin, phytotoxin, in-vivo production, HPLC purification, 155
Phomozin, *Phomopsis helianthi*, phytotoxin, in-vivo production, HPLC purification, 155
Phosphatidylcholine, *Nicotiana tabacum*, cell and tissue culture, choline kinase, lipids, 167
Phosphatidylinositol cycle, *Catharanthus roseus*, growth substances, inositol phosphates, phytohormones, PI-kinase, suspension cultured plant cells, 33
Phospholipase C, *Solanum tuberosum*, cytidine, diphosphocholine, 25
Photosynthesis, *Betula pendula*, protoplast isolation, homogeneity, diurnal cycle, 73
Phytohormones, *Catharanthus roseus*, growth substances, inositol phosphates, phosphatidylinositol cycle, PI-kinase, suspension cultured plant cells, 33
Phytotoxin, *Phomopsis helianthi*, phomozin, in-vivo production, HPLC purification, 155
PI-kinase, *Catharanthus roseus*, growth substances, inositol phosphates, phosphatidylinositol cycle, phytohormones, suspension cultured plant cells, 33
Pisum sativum, non-histone chromosomal proteins, HMG proteins, chromatin, nuclei, 55

Pisum sativum, nuclear proteins, protein kinase, cell proliferation, 39
Polyphosphoinositide, *myo*-inositol, pectin, soybean (cell suspension), 203
Potato, cell culture, protoplast-calli, protoplasts, *Solanum phureja*, 257
Petroselinic acid, *Daucus carota*, zygotic and somatic embryos, storage lipids, 177
Protection by substrate, isocitrate lyase, active site groups, chemical inactivation, 47
Protein differences, shoot regeneration, callus growth, 83
Protein kinase, *Pisum sativum*, nuclear proteins, cell proliferation, 39
Protoplast-calli, cell culture, potato, protoplasts, *Solanum phureja*, 257
Protoplasts, cell culture, protoplast-calli, potato, *Solanum phureja*, 257
Protoplast (mesophyll and suspension culture), asymmetric membrane breakdown, electrofusion, *Nicotiana tabacum*, *Pennisetum americanum*, *Panicum maximum*, selective pairing, 93
Protoplast fusion, cytoplasmic male sterility, cybrid, triazine tolerance, *Brassica napus*, Ogura cytoplasm, 63
Protoplast fusion, *Solanum tuberosum*, micromanipulation, somatic hybrids, isozyme analysis, DNA analysis by flow cytometry, 107
Protoplast isolation, *Betula pendula*, photosynthesis, homogeneity, diurnal cycle, 73
Purification, aminopeptidase, cotyledons, *Glycine max*, HPLC, activity, 9

Quercus, *Castanea*, globulins (11S), glutelins, 145

Regenerated plants, hairy roots, horseradish, isoperoxidase, 195

Seeds, *Glycine max*, differentiation, lipid metabolism, 1
Seed lectin, *Arachis hypogaea*, lectin homology, nodule lectin, 123
Selective pairing, asymmetric membrane breakdown, electrofusion, protoplast (mesophyll and suspension culture), *Nicotiana tabacum*, *Pennisetum americanum*, *Panicum maximum*, 93
Shoot regeneration, protein differences, callus growth, 83
β-Sitosterol, tobamoviruses, *Artemisia annua*, virus inhibitory agents(s), stigmasterol, 161
Solanum phureja, cell culture, protoplast-calli, potato, protoplasts, 257
Solanum tuberosum, cytidine, diphosphocholine, phospholipase C, 25
Solanum tuberosum, protoplast fusion, micromanipulation, somatic hybrids, isozyme analysis, DNA analysis by flow cytometry, 107
Somatic hybrids, *Solanum tuberosum*, protoplast fusion, micromanipulation, isozyme analysis, DNA analysis by flow cytometry, 107
Soybean (cell suspension), *myo*-inositol, pectin, polyphosphoinositide, 203
Stigmasterol, tobamoviruses, *Artemisia annua*, virus inhibitory agents(s), β-sitosterol, 161
Storage lipids, *Daucus carota*, zygotic and somatic embryos, petroselinic acid, 177
Stress, heat, ethylene, apoplast, 19
Suspension cultured plant cells, *Catharanthus roseus*, growth substances, inositol phosphates, phosphatidylinositol cycle, phytohormones, PI-kinase, 33

Tissue culture, *Haplopappus gracilis*, clonal multiplication, clonal stability, karyotype analysis, chromosomes, 245
Tobamoviruses, *Artemisia annua*, virus inhibitory agents(s), β-sitosterol, stigmasterol, 161
Triazine tolerance, cytoplasmic male sterility, cybrid, *Brassica napus*, protoplast fusion, Ogura cytoplasm, 63
Triticum turgidum, wheat storage proteins, PCR, gene cloning, durum wheat, 229

Virus inhibitory agents(s), tobamoviruses, *Artemisia annua*, β-sitosterol, stigmasterol, 161

Wheat storage proteins, PCR, gene cloning, *Triticum turgidum*, durum wheat, 229

Zygotic and somatic embryos, *Daucus carota*, storage lipids, petroselinic acid, 177
